> Anyone have experience and know where to get
 > silk screens made?

I'd say make your own. It's been a while and new materials and suppliers may be available, but a decent-sized art supply house should have everything you need, or via mail order from companies like <http://www.dickblick.com/>

You can make your own screens by stretching fabric over wood or aluminum frames and exposing artwork onto a photo-sensitive emulsion. When the

exposed emulsion is cleaned away, you are left with clear areas in the screen fabric through which ink can be applied to the panel or whatever, leaving a copy of the artwork on each screened piece. Speedball and Print Gocco are two suppliers of entry level kits and you can also buy pre-stretched screens and re-use them by removing the pattern when you are finished with it. My last foray into screen printing I used a Ulano emulsion but a film-type material is also available.

Screen printing is the only method I've found to print white-colored images, or to reproduce things like logos, graphics, etc. It's actually fun once you understand the process and there are lots of resources on the web and elsewhere, such as the link below - have fun!
